

Community Hospital Emergency Departments Admissions for Persons Diagnosed with a Mental Illness, Developmental Disability or Substance Abuse Disorder

ThirdQuarter SFY 2011-2012
(January- March 2012) Prepared by:

Quality Management Team
Community Policy Management Section

Division of Mental Health, Developmental Disabilities and Substance Abuse Services

This workbook is in response to North Carolina General Statute 112C-147.1.1 Section 10.49(r) which requires the Department of Health and Human Services to report on community hospital emergency department admissions of individuals with mental health, developmental disabilities, and substance abuse diagnoses. This workbook covers admissions for the current quarter plus, in some instances, trend data from prior quarters. Raw data is also included so that the LMEs can conduct their own analyses.

This workbook is organized in the following manner:

Charts and Tables - Tables and Charts are numbered on the TOC and the Excel workbook tab labels. Several of the tables are set up where data can be filtered by LME, age group, disability, or gender. This allows the user to select the data that is of interest to them and reduces the size of the workbook.

Appendices - Appendices are listed in the Table of Contents (TOC) and are in yellow tabs labeled with letters.

Data- All data that was used to create charts and tables are provided in this section; these tab labels are color-coded red.

To Print: Print either the Green Tabs (the body of the report) or the Green and Yellow tabs (if you wish to include the appendices). You will likely want to select the LME of interest in the tab labeled "3. Select LME" and the tab labeled "9. Disposition" prior to printing. You can group multiple tabs (sheets) together to print by clicking on the left most tab and then shift-clicking on the right most tab you want to print. To Ungroup the tabs when you are done, right click on any of these tabs and select "Ungroup Sheets".

Notes about data

Data for this workbook were obtained from the North Carolina Disease Event Tracking and Epidemiologic Collection Tool (NC DETECT). General information on this tool can be found in Appendix C. ICD-9 codes were used to identify primary and co-occurring diagnoses for mental health, developmental disabilities, and substance abuse (MH/DD/SA) disorders. These codes are listed in Appendix A. The International Statistical Classification of Diseases and Related Health Problems (most commonly known by the abbreviation ICD) provides codes to classify diseases and a wide variety of signs, symptoms, abnormal findings, complaints, social circumstances and external causes of injury or disease.

NC-DETECT data from the hospitals was compiled into a centralized database, and selected parts of it were extracted, aggregated, and sent to the Division of Mental Health, Developmental Disabilities and Substance Abuse Services (DMH/DD/SAS) for this report, through a data sharing agreement with the Division of Public Health.

The aggregate data included the total number of admissions as well as the number of admissions diagnosed with a mental health, developmental disabilities, and/or substance abuse disorder. The latter included primary and co-occurring ICD-9 diagnostic codes, recorded at the time of admission, using the NHAMCS 2005 Emergency Department Data Summary classification system.

The aggregate data included the following basic demographic information on admissions: 1) whether the admission was a child (under age 18) or an adult (age 18 and over); 2) whether the admission was a female or a male; 3) county of residence; and 4) the Local Management Entity (LME) service area in which the individual resides. It is important to note that counties and LMEs are both defined by the individual's county of residence, as reported by the individual.

CAUTION: In order to comply with HIPAA privacy protection protocols, NC DETECT has redacted data from cells that contain counts of 10 or less. This primarily affects the LME and county level data displayed in this report. The values in tables that have had data redacted have been replaced with an asterisk (*).

Due to data redaction and missing data elements in some records in the NC DETECT data (e.g. unable to identify consumer's county or LME, disposition not provided), totals for LME and county level data tables will not equal totals in the statewide section of this report, and total dispositions will not equal total admissions.

To avoid confusion and to facilitate comparison with state averages, "Statewide" numbers below LME and county data tables in this report represent actual [statewide summary data \(as this data is most complete\)](#), not necessarily the total of the numbers in the table above.

This workbook includes the categories of primary diagnosis and primary or co-occurring diagnosis. For the purposes of this workbook, the category **"primary"** is the most clinically significant ED diagnosis or the purpose of the ED visit. For the term "primary or co-occurring diagnosis" the mental health, developmental disability or substance abuse diagnosis can be one of any 11 diagnoses recorded during the ED visit.

Table of Contents

1. Statewide ED Admission Trends
2. ED Admission Trend, and % with Primary MH/DD/SA Diagnosis
3. ED Admission Counts for Individuals with a Primary MH/DD/SA Diagnosis
4. ED Admissions for Primary Diagnosis Category - Age and Gender
5. ED Admissions for Primary and Co-Occurring Diagnosis Category - Age and Gender
6. ED Admission Rates for Individuals with a Primary MH/DD/SA Diagnosis, by Local Management Entity
7. ED Admission Rates for Individuals with a Primary or Co-Occurring MH/DD/SA Diagnosis, by LME
8. Admission Rates by County for Admissions with a MH/DD/SA Diagnosis
9. Disposition of Admissions with Any (Primary or Co-Occuring) Diagnosis of MH/DD/SA

Appendices

- Appendix A. ICD-9 Codes
- Appendix B. Community Hospitals Reporting Data
- Appendix C. Data Source

Notes

- "Admitted" is a general code that covers any person admitted as an inpatient to any unit of the hospital. It is intended to be used to report admissions to units other than Psych or ICU, which have their own codes; however, it is possible that some emergency departments may be using this code to report all admissions.
- "Transferred" includes transfer to prison, jail, general hospital, another type of institution, or to home care.
- Other category is not clearly defined.
- An asterisk (*) indicates the number was 10 or less in the raw data; however, on tables like this the asteriks show up as Zero. The actual number was redacted from the data that was provided for privacy protection reasons. When there are no instances of a specified disposition, the table displays a blank.
- This report is based on the MH, DD, and SA Dx codes of interest that appear as any of the 11 allowable ICD-9 codes submitted by emergency departments.
